

Thor is a semi-aniline ox hide with a natural grain and a coated surface.

More uniform hides are selected for this type of leather. Thor has a largely even surface structure with some visible scars or other marks.

After aniline dyeing, a pigmentation coat is added to give color uniformity. A top coating is then applied giving the leather a protective layer.

Leathers of this type have a more natural touch and low breathability. The main advantage of Thor is its low maintenance, its resistance to staining and to fading in sunlight.

Carl Hansen & Søn recommends Thor for residential use where a balance between comfort and maintenance is required. Thor is suitable for all Hans J. Wegner's soft upholstery produced by the Company.

Thor is available in 11 colourways. (Digital representation only)
